

COVID-19 VACCINE

MYTHS

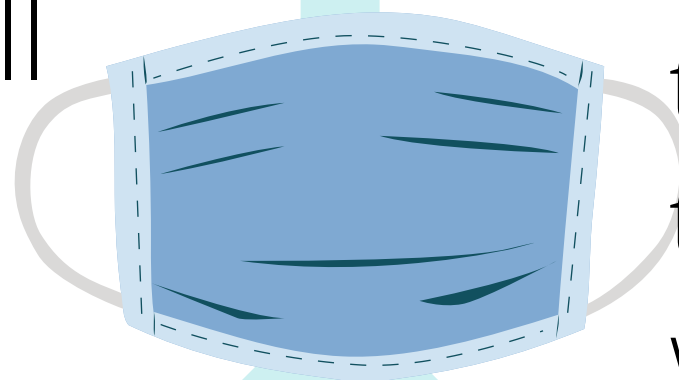

FACTS

The COVID vaccine is unsafe because it was developed so quickly.

The vaccine builds on previous research, worldwide efforts, and technological advances, allowing for faster than ever vaccine creation.

The COVID vaccine will give me coronavirus.

None of the vaccines have the live virus in it, so therefore, it can't infect you with COVID.

I already had COVID-19, I don't need to take the vaccine.

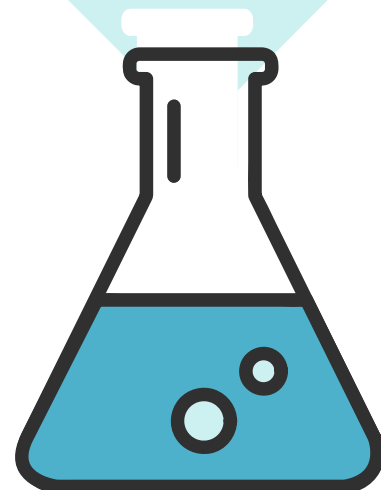

We don't know how long immunity from infection lasts, so the safest option is to get vaccinated.

The COVID vaccine will enter my cells and damage my DNA.

mRNA vaccines use only naturally occurring proteins which help your body develop an immune response.

The COVID vaccine contains controversial substances.

The vaccines includes proteins, fats, salts and sugar with and special acids to help preserve the vaccine.
